R-Presentations

The presentations feature of RStudio is awesome. You can put together a nice-looking presentation relatively quickly that you can then export to HTML5 (complete with transitions) or PDF.
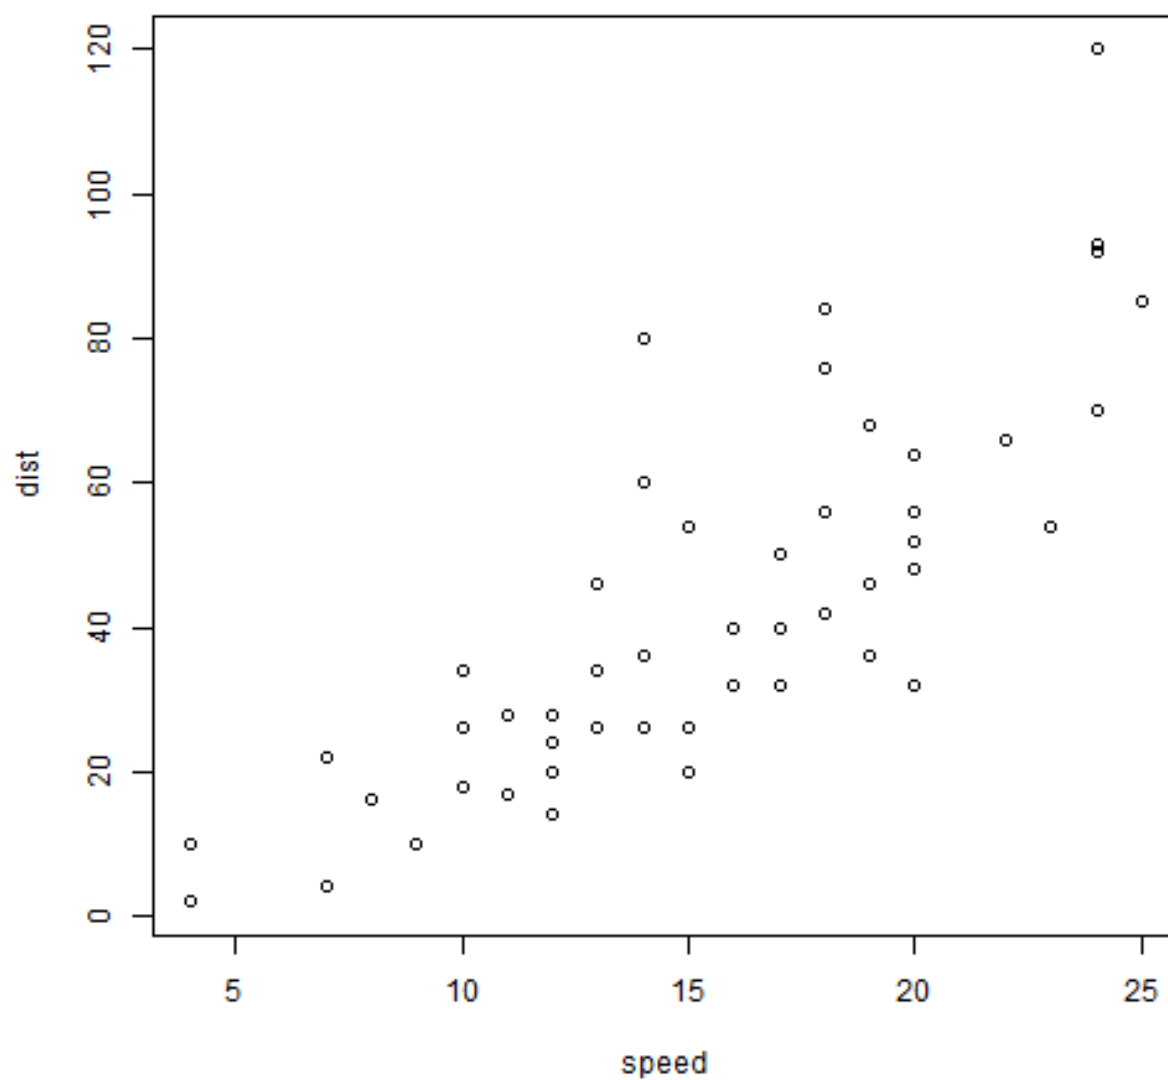

RStudio will execute any R code in your presentation when you export it, so any syntax errors will be flagged (it won't export). To top it off, the whole thing is reproducible.

Slide With Code

```
summary(cars)
```

```
     speed           dist
 Min.   : 4.0   Min.   :  2.00

 3rd Qu.:19.0   3rd Qu.: 56.00
 Max.   :25.0   Max.   :120.00
```

Slide With Plot

Special Background

type: myspecialslide

You'll notice 2 things about this slide:

1. The background color for this slide is different. You can set this slide to a particular type, for example, "myspecialslide"
2. There is no title on this slide. It's hidden using title=false property for the slide.
